

Sovereign Header Height Estimator

The Sovereign stacking door system breaks into 2, 4, or 6 panels depending on total height of the opening. The max height for each panel is 2 feet, therefore a 4' tall door will be two panels, but a 5' door would be 4 panels.

Below is an estimate of total height needed above the opening for the motor, shaft, drums, and panels to allow enough space to stack up based upon the number of panels required.

Door Height	Number of Panels	Headroom Required
Below 4'	2	16"
Between 4' - 8'	4	21.5"
Between 8' - 12'	6	26.5"
