

# THE MURPHY HOME POOL HOUSE

## THE PROJECT

The pool house in Murphy, TX, has undergone a remarkable transformation with the installation of two S-2000 full-height bifold doors and one S-1000 single panel door, both of which are part of Renlita's vertical lift door systems. These Renlita vertical lift doors were chosen to enhance the aesthetics and functionality of the pool house, providing a seamless connection between indoor and outdoor spaces.

The client's pool house posed several design and functionality challenges that needed innovative solutions. The primary goals were to create a harmonious transition between the indoor and outdoor areas and to elevate the overall aesthetic appeal of the space. Traditional garage doors with tracks and hangar doors were considered, but they did not align with the desired design flexibility and aesthetics that modern architecture demanded.

## OUR SOLUTION

Renlita's S-2000 Hingeway and S-1000 Floataway doors were chosen to address the challenges posed by the pool house project. These counterweight doors offered a superior alternative to traditional garage or hangar doors and provided a versatile solution that met the project's unique requirements.

The installation of two S-2000 full-height bifold doors has proven to be a game-changer for the pool house. When opened, these doors create a breathtaking and expansive gateway, seamlessly connecting the interior and exterior spaces. This unique feature sets them apart from garage doors with tracks, which often obstruct the interior. The S-2000 doors not only add functionality but also enhance the aesthetics of the pool house. The design flexibility provided by these doors allows for a perfect blend of rustic and modern elements.

The S-1000 single panel door was strategically placed to complement the S-2000 doors. This door makes the pool house more functional and helps connect the indoor and outdoor areas smoothly. Its single panel design is elegant and offers a sense of continuity with the surrounding architecture. This door is not only a practical entry point but also a statement piece in the overall design of the space.

The installation of Renlita's S-2000 and S-1000 vertical opening solutions in the Murphy, TX, pool house project transformed the space into an inviting and visually striking environment. These doors demonstrate how counterweight doors can seamlessly connect indoor and outdoor spaces. They distinguish themselves from typical garage and hangar doors. The project serves as a testament to the adaptability and elegance of Renlita's door systems, adding a new level of sophistication and functionality to the pool house.

## BENEFITS

### 1. Seamless Indoor-Outdoor Integration

When open, the doors created an expansive and unobstructed connection between the indoor and outdoor spaces, allowing for seamless integration and a sense of unity. The doors design allowed natural light to flood the interior, creating a welcoming and well-lit environment throughout the day.

### 2. Improved Versatility

The adaptability of the Renlita counterweight door systems added versatility to the pool house. Whether for casual poolside gatherings or cozy indoor evenings, these doors offered an inviting atmosphere for various occasions.

### 3. Functional Elegance

These doors offered both elegance and functionality, making them a perfect fit for modern architectural demands. Their design flexibility allowed for customization to match the pool house's aesthetic. The counterweight system ensured smooth and reliable operation, offering a touch of luxury and sophistication to the pool house's design.
