

HEWLETT PACKARD BOISE IDAHO OFFICE

THE PROJECT

Hewlett Packard's office in Boise, Idaho, recently underwent a significant architectural upgrade by installing custom-designed S-2000 Hingeway vertical opening doors. These doors not only added an elegant touch to the building's appearance but also brought about a positive change in how the workspace functions and connects.

Unlike traditional industrial hangar doors or hydraulic doors, which can be slow, noisy, and prone to messy hydraulic fluid leaks, Hewlett Packard sought a superior alternative. The S-2000 doors were chosen to not just enhance the office's looks but also seamlessly bridge the gap between the inside and outside spaces, improving both the visual appeal and functionality of the workspace.

OUR SOLUTION

The S-2000 Doors installed at Hewlett Packard were custom-designed with meticulous attention to detail. Crafted with insulated glass, they radiate an air of sophistication that perfectly complements the existing surroundings both inside and outside the office premises. The outcome is a visually appealing and harmonious addition to the workspace, leaving a strong impression on anyone who sees it.

However, these doors are more than just architectural embellishments. They serve as a gateway to a world of possibilities. When opened, they graciously usher occupants from the interior hallway to the enchanting exterior courtyard.

Here, the vibrant allure of nature beckons, providing an oasis of serenity and recreational opportunities. The nearby sand volleyball and basketball courts let employees relax, recharge, and connect, creating a well-rounded and satisfying workplace.

Incorporating the S-2000 Hingeway doors at the Hewlett Packard office has significantly enhanced both the aesthetics and functionality of the space. These doors epitomize the perfect blend of form and function, offering a harmonious bridge between the indoor and outdoor spaces. This bridge fosters a work environment that is as inviting as it is efficient.

The installation of S-2000 Hingeway vertical opening doors at Hewlett Packard's Boise office has been a game-changer. Beyond their stunning visual appeal, these doors have transformed the office into a place where work and relaxation harmoniously coexist. The innovative design and flawless execution have created a space that is not only beautiful but also highly functional.

BENEFITS

1. Improved Functionality

The doors serve as a harmonious bridge between the indoor and outdoor spaces. This integration fosters a work environment that is not only inviting but also efficient. Employees can easily access the outdoor recreational area, promoting a healthier work-life balance. These doors have improved the functionality of the workspace by allowing for efficient connectivity between indoor and outdoor areas.

2. Enhanced Aesthetics

The S-2000 doors have greatly enhanced the aesthetics of the surroundings, adding a touch of sophistication and elegance to the office premises. The custom design and insulated glass panels seamlessly blend with the existing architecture, creating a visually cohesive workspace.

3. Connectivity and Balance

The S-2000 doors transformed the office space into a professional workspace connected to the recreational haven outside. This connection encourages employees to make the most of their surroundings, contributing to a balanced and fulfilling work environment.
